

What is claimed is:

1. A loudspeaker assembly, comprising:
a loudspeaker baffle, said baffle being provided with at least
5 one opening for audio wave output; and,
at least one transducer mounted to said baffle such that said
audio waves emanating from a mounted transducer avoid
being distorted by said baffle.
- 10 2. The loudspeaker assembly of Claim 1, wherein said assembly is
provided with a natural rock appearance.
3. The loudspeaker assembly of Claim 1, wherein said assembly is
provided with a natural wood appearance.
- 15 4. The loudspeaker assembly of Claim 2, wherein said assembly is
useable in an outdoor environment.
5. The loudspeaker assembly of Claim 3, wherein said assembly is
20 useable in an outdoor environment.
6. An outdoor loudspeaker assembly, comprising:
a loudspeaker baffle, said baffle being provided with at least
one opening for audio wave output; and,
25 at least one transducer mounted to said baffle such that said
audio waves emanating from a mounted transducer avoid
being distorted by said baffle.
7. The outdoor loudspeaker assembly of Claim 6, wherein said
30 assembly is provided with a natural rock appearance.
8. The outdoor loudspeaker assembly of Claim 6, wherein said
assembly is provided with a natural wood appearance.

9. A loudspeaker assembly, comprising:
a loudspeaker baffle, said baffle being provided with at least
one opening for audio wave output;
a flange, said flange being recessed the same distance as the
baffle's surface thickness; and,
at least one transducer mounted to said baffle by said flange
such that said audio waves emanating from a mounted
transducer avoid being distorted by said baffle.
10. The loudspeaker assembly of Claim 9, wherein said assembly is
provided with a natural rock appearance.
11. The loudspeaker assembly of Claim 9, wherein said assembly is
provided with a natural wood appearance.
12. The loudspeaker assembly of Claim 10, wherein said assembly
is useable in an outdoor environment.
13. The loudspeaker assembly of Claim 11, wherein said assembly
is useable in an outdoor environment.
14. A loudspeaker assembly, comprising:
a loudspeaker baffle, said baffle being provided with at least
one opening for audio wave output;
a flange, said flange being recessed the same distance as the
baffle's surface thickness; and,
at least one transducer mounted to said baffle by said flange
such that the outermost point of said transducer is
substantially flush with said baffle's surface.
15. The loudspeaker assembly of Claim 14, wherein said assembly
is provided with a natural rock appearance.

16. The loudspeaker assembly of Claim 14, wherein said assembly is provided with a natural wood appearance.
17. The loudspeaker assembly of Claim 15, wherein said assembly
5 is useable in an outdoor environment.
18. The loudspeaker assembly of Claim 16, wherein said assembly is useable in an outdoor environment.
- 10 19. A loudspeaker assembly, comprising:
a loudspeaker baffle, said baffle being provided with at least one opening for audio wave output;
a grille frame, whereby said frame provides an interface for attaching a grille to said baffle;
15 a flange, attached to said baffle; and,
at least one transducer mounted to said baffle by said flange such that said audio waves emanating from a mounted transducer avoid being distorted by said baffle and said frame.
- 20 20. The loudspeaker assembly of Claim 19, wherein said assembly is provided with a natural rock appearance.
21. The loudspeaker assembly of Claim 19, wherein said assembly
25 is provided with a natural wood appearance.
22. The loudspeaker assembly of Claim 20, wherein said assembly is useable in an outdoor environment.
23. The loudspeaker assembly of Claim 21, wherein said assembly
30 is useable in an outdoor environment.
